

PODD60-01 Triple-mode micro-pod

Model: PODD60-01

PRODUCT DESCRIPTION

At just 85g, the ultra-lightweight PODD60 micro-pod withstands catapult-launch impacts for drones. Its integrated servo image stabilization ensures stable footage, while built-in intelligent tracking locks onto targets. Engineered for versatility, it features wide voltage input (12-28V) and dynamic power control to extend flight time. All electronics are EMC-compliant, housed in a rugged metal shell for maximum reliability. This compact drone payload combines high performance, impact resistance, and lightweight design, making it ideal for military reconnaissance, surveillance, and industrial inspection missions requiring reliable intel.

TECHNICAL PARAMETER

System specification	
System type	Gyro stability
Weight	≤85g
System characteristics	
Platform type	Two-axis
Pitch	-110°~+110°
Roll	-100°~+40°
Max angular velocity	≥100°/s
Stability accuracy	0.1mrad(1°/2Hz)(1σ)
Motor encoder accuracy	≤0.3°
Visible Light Imaging (Wide Field of View)	
Resolution and frame rate	1920×1080@60fps
FOV	82°×52° (3.2mm)
Visible Light Imaging (Narrow Field of View)	
Resolution and frame rate	1920×1080@60fps
FOV	19.7°×11° (16mm)
Thermal IR	
Resolution and frame rate	640×512@50fps

FOV	32.9°×26.6° (13mm)
Target tracking	
Tracking speed	≥40°/s
System external interface	
Control interface	TTL/232/SBUS
Video output	Network (Rtsp)
Power supply	
Supply voltage	12V~28V
Power consumption	Av.≤6W
	Max.≤15W
Environmental condition	
Working temp	-20℃~+55℃
Storage temp	-20℃~+60℃
Launch impact	≥400g

MECHANICAL STRUCTURE

CONTROL PROTOCOL

1 Scope

This agreement specifies the data communication process and control protocol between DYT and controllers (such as flight control and pod controllers).

2 Communication between DYT and Controllers

2.1 Data Communication Process

- The controller sends instructions to DYT. The instruction content is shown in Table 1. All instructions are trigger-type and only need to be sent once.
- After DYT powers on and completes self-check, it sends information to the controller at a cycle of 16.7 ms. The information content is shown in Table 2.
- For multi-byte variables, the low byte comes first, followed by the high byte.
- The default baud rate of the serial port is 115200, and the parity check mode is no parity.
- When target position calculation and data guidance functions are required, the attitude angles and latitude-longitude information of the carrier aircraft need to be sent to DYT at a frequency of 1–60 Hz.
- SEI information is data superimposed in the H.264 video stream and is disabled by default.

2.2 Communication Protocol

Table 1 Control Instruction Data

Data source		Controller		
Destination		DYT		
Transmission Frequency		Trigger to Send		
Byte Sequence Number	Parameter Name	Data Type	Explanation	Bytes Occupied
0	Synchronous code 1	U8	0xEB	1
1	Synchronous code 2	U8	0x90	1

			0x24: Pan/Tilt Search 0x25: Zoom Command 0x26: Specify Frame Angle 0x27: Motor On 0x28: Motor Off 0x29: Follow Mode Off 0x2A: Azimuth Follow 0x2B: Center Position 0x2C: Suppress Gyro Drift 0x2D: Laser Ranging On 0x2E: Laser Ranging Off 0x30: Electric Lock Mode 0x31: Release Electric Lock 0x32: Azimuth Scanning 0x33: Stop Scanning 0x39: Calibrate Gyroscope (Parameter 3 is zero. Turn off the motor first, keep stationary for 10s after sending the command, then turn on the motor.) 0x3A: Data Guidance 0x3B: Specify Attitude Angle 0x3C: Calibrate Zero Position of Flight Control and Pod Attitude Angles 0x4A: Image Board Power Control 0x50: Pseudo Color 0x51: OSD Display On 0x52: OSD Display Off 0x55: Low Light Mode Off 0x56: Low Light Mode On 0x58: Digital Zoom On 0x59: Digital Zoom Off 0x5A: Specify Zoom Factor 0x5B: Take Photo 0x5C: Focus Mode 0x5D: Focus Position 0xA0: Save FLASH Parameters 0xB0: Lifting Mechanism Control 0xB1: Set Current Angle as Zero Position	
3、4	Parameter X	S16	Default value is 0. When Control Information = 0x0D (Point Tracking): Represents the horizontal pixel coordinate of the locking point. The image center is 0. When Control Information = 0x24 (Pan/Tilt Search): Represents the azimuth rotation speed in units of 0.1°/s. When Control Information = 0x26 (Specify Frame Angle), 0x32 (Azimuth Scanning), or 0x3B (Specify Spatial Angle):	2

			Represents the azimuth angle in units of 0.01°. When Control Information = 0x2C (Suppress Gyro Drift): Data type is int16 with a range of -2000 to 2000. When Control Information = 0x5A (Specify Zoom Factor): Represents the zoom factor in units of 0.1x. When Control Information = 0xB0 (Lifting Control): 0 = Stop, 1 = Ascend, 2 = Descend. When Control Information = 0x4A (Image Board Power Control): 0 = Restart, 1 = Power On, 2 = Power Off.	
5、6	Parameter Y	S16	Default value is 0. When Control Information = 0x0D (Point Tracking): Represents the vertical pixel coordinate of the locking point. The image center is 0. When Control Information = 0x24 (Pan/Tilt Search): Represents the pitch rotation speed in units of 0.1°/s. When Control Information = 0x26 (Specify Frame Angle), 0x32 (Azimuth Scanning), or 0x3B (Specify Spatial Angle): Represents the pitch angle in units of 0.01°.	2
7	Parameter 3	U8	When the control information is 0x01 to 0x04: It represents the small picture in picture-in-picture. 0 = Cancel multi-screen; 1 = Visible 1; 2 = Visible 2; 3 = Infrared 1; 4 = Infrared 2; When the small picture is the same as the large picture, the multi-screen is canceled. When the control information is 0x32 "Azimuth Scanning", it represents the scanning speed, where 1 bit = 0.2°/s.	1
8	Zoom Rate	S8	When the control information is "Zoom Command", 0 to +100 represents the zoom-in rate, and 0 to -100 represents the zoom-out rate.	1
9~14	Keep			6
15	Checksum	U8	Start adding from the 0th byte, and take the lower 8 bits.	1
	Total			16

When the control information is 0x3a "Data Guidance", bytes 3 to 14 are as shown in the following table.

Byte Sequence Number	Parameter Name	Data Type	Unit	Explanation	Bytes Occupied
3	Data Guidance Status	U8		0x00: Exit Geographic Tracking 0x01: Geographic Tracking of Current Field of View Center Position 0x02: Geographic Tracking of Specified Position 0x0A: Calibration Based on Known Target	1
4~7	Target Latitude	Int32	10 ⁻⁷ °		4

8~11	Target Longitude	Int32	10 ⁻⁷ °		4
12、13	Target Altitude	S16	0.2m		2
14	Reserved	U8			1

Command Examples:

Rotate right at 10°/s: EB 90 24 64 00 00 00 00 00 00 00 00 00 03

Rotate down at 10°/s: EB 90 24 00 00 9C FF 00 00 00 00 00 00 3A

Stop rotation: EB 90 24 00 00 00 00 00 00 00 00 00 00 9F

Go to azimuth 10°, pitch -10°: EB 90 26 E8 03 18 FC 00 00 00 00 00 00 00 A0

Zoom in: EB 90 25 00 00 00 00 00 32 00 00 00 00 00 D2

Zoom out: EB 90 25 00 00 00 00 00 CE 00 00 00 00 00 00 6E

Stop zooming: EB 90 25 00 00 00 00 00 00 00 00 00 00 00 A0

Zoom to 5x: EB 90 5A 32 00 00 00 00 32 00 00 00 00 00 39

Point tracking at coordinates (100, -200): EB 90 0D 64 00 37 FF 01 32 00 00 00 00 00 55

Stop tracking: EB 90 0E 00 00 00 00 00 00 00 00 00 00 89

49	Year	U8		+2000	1
50	Month	U8			1
51	Day	U8			1
52	Hour	U8			1
53	Minute	U8			1
54	Second	U8			1
55	Centisecond	U8	10ms		1
56、57	Airspeed	U16	0.5m/s		2
58、59	Satellite Ground Speed	U16	0.5m/s		2
60	Frame Count	U8	0-255 cycle		1
61、62	Reserved				2
63	Checksum	U8		Start adding from byte 0 and take the lower 8 bits.	1
	Total				64

2.3 Network Control

When network control is required, establish a TCP connection to port 2000 of the pod. The TCP protocol is encapsulated based on the above-mentioned protocol, while the protocol returned by the pod remains unchanged as described above.

Byte Sequence Number	Name	Content	Explanation
0	Frame Header	0xeb	
1	Frame Header	0x90	
2	Data Length	N	U8 type, where N is the data length.
3~2+N	Data	EB 90.....	
3+n	Checksum		Start accumulating from the 3rd byte and take the lower eight bits.

Example: eb 90 10 eb 90 2b 00 00 00 00 00 00 00 00 00 00 00 00 a6 4c (4c is the checksum, starting accumulation from the second eb)

Where: eb 90 2b 00 00 00 00 00 00 00 00 00 00 00 00 a6 is the valid data (a6 is the checksum, starting accumulation from eb)

DYT HOST COMPUTER SOFTWARE OPERATION INSTRUCTIONS

1. Connection Schematic Diagram

Figure 1 Test Connection Schematic Diagram

2 Pre-power-on Preparations

2.1 Pre-power-on Preparations

- 1) Please install the pod in a suspended manner as shown in Figure 2.
- 2) Connect the wires according to the correct wiring sequence.
- 3) Use a USB-to-TTL cable and a network cable to connect the pan-tilt to the computer.
- 4) Check the power supply voltage, then power on.

3 Operation of the Host Computer

3.1 Power On

Turn on the control software and connect the pod's video source and control interface to the computer according to requirements.

Figure 3 Open Interface

3.1.1 Control Interface Connection

The control interface supports serial port control or network port control.

For serial port control: As shown in Figure 4-1, select the "Serial Port" tab, click the serial port drop-down list, select the corresponding serial port number of the pod, and click "Connect".

For network port control: As shown in Figure 4-2, select the "Pod Network Port" tab, enter the pod's IP, check "Add EB90", and click "Connect".

After a successful connection, the pan-tilt status will be updated in real time at the lower left corner.

Figure 4-1 Serial Port Connection

Figure 4-2 Network Port Connection

3.1.2 Turn on Video

The host computer supports two video input methods: USB capture card input and network input.

- 1) Make wiring according to the input method (completed before power-on).
- 2) As shown in Figure 5-1 and Figure 5-2, select the corresponding tab according to the input method.
- 3) Enter the video source for USB capture card input or the video stream address for network input.
- 4) Click the "Turn on Video" button (wait for a few seconds; if the connection is successful, the pan-tilt live video will be displayed in the video window).

3.2 Common Controls

3.2.1 Pod Rotation

Table 1

No.	Button/Input Box	Functions
1	Up/Down/Left/Right/Stop	Control the rotation direction of the pod.
2	Center	Rotate the pod to the zero position.
3	On/Off Motor	Control the power on/off of the motor.
4	Azimuth Follow/Stop Following	Control whether the pod's azimuth axis follows the aircraft's rotation.
5	Specified Angle	Control the pod to rotate to a specified angle (values in the azimuth and pitch input boxes).

Figure 6 Pod Rotation Control

3.2.2 Target Tracking

Table 2

No.	Button/Input Box	Functions
1	Double-click in the video	Track a specified target.
2	Right-click in the video	Cancel tracking.
3	Start tracking	Directly track the target at the center of the video.
4	Stop button	Cancel tracking.
5	Turn on/off person-vehicle recognition	Turn on or off the person-vehicle recognition function.
6	Automatic recognition to tracking	Retain.
7	Semi-automatic tracking	Suitable for tracking person-vehicle targets, and the tracking process will be corrected according to the recognition algorithm.
8	Traditional tracking	Traditional tracking algorithm that does not recognize targets.

Figure 7 Target Tracking

3.2.3 Image Display

There are mainly two types of display screens: visible light and infrared. Among them, infrared has two colors: white hot and black hot, and digital zoom can be performed on both visible light and infrared respectively.

Figure 8 Image Display Control - Common Functions

Figure 9 Image Display Control - Movement Parameter Settings

Table 3

No.	Button/Input Box	Functions
1	OSD (On-Screen Display)	Turn on or off the OSD (On-Screen Display) of the screen.
2	Electronic Image Stabilization	Enable or disable electronic image stabilization (supported by some pods).
3	Low-Light Mode	Activate low-light mode when the illumination is dim.
4	Image Enhancement	Activate image enhancement mode when there is fog.
5	Local Image Capture	Retain.
6	Electronic Zoom	Enable or disable electronic zoom (supported by some pods).

3.2.4 Laser Ranging

As shown in Figure 8, clicking the "Start Ranging" button enables the laser ranging function. The measured values can be viewed in the parameter display area, as shown in Figure 10.

Working Status	Current Image: Visible	X-axis Off-target Amount: 0.0	Azimuth Rate: 0.0	Zoom Multiple: 0.0	Motor Status: off	Electric Lock Mode: off	Q16 Bytes
Azimuth Angle: 0.0	Tracking Status: Stopped	Y-axis Off-target Amount: 0.0	Pitch Rate: 0.0	Laser Ranging: On	Following Status: off		32 Bytes
Pitch Angle: 0.0	Recognition Status: 0	Target Type: 0	Roll Rate: 0.0	Video Storage: off	Image Enhancement: off		
Roll Angle: 0.0							

Figure 10 Laser Ranging Parameter Display Area

3.3 Common Issues

3.3.1 Finding the Serial Port Number

Right-click the "Computer" icon, select "Properties", click Device Manager, and the interface shown in Figure 11 will appear. In general, the selected serial port number is the one that refreshes after inserting the connection cable (or port number). Double-click "Ports (COM & LPT)", and the refreshed USB port is the selected port.

Figure 11 Device Manager

3.3.2 No Network Video Output

Figure 12 IP Address Modification

- 1) On the computer, open "Control Panel" → Network and Internet → "Network and Sharing Center";
- 2) Click the "Local Area Connection" icon → "Properties", then double-click "Internet Protocol Version 4 (TCP/IPv4)";
- 3) Ensure that the computer's IP address is in the same network segment as the video stream address. For example, if the video stream address is `rtsp://192.168.2.119/554`, the computer's IP address can be set to 192.168.2.56;
- 4) Turn off the firewall;
- 5) Click the "Open Video" button on the host computer, and the imaging video will be displayed on the right side of the host interface.

PRECAUTIONS FOR USE AND MAINTENANCE

1. The daily maintenance tasks for operators are limited to replacing or inspecting cables, performing routine cleaning, and conducting functional checks to ensure the instrument remains in good technical condition.
2. Do not open the casing without authorization. There are no user-repairable components inside the machine. When a system failure occurs, the manufacturer's technical personnel should locate the fault before proceeding with repairs.
3. If the product is stored for a long period or not in use, it should be kept in a cool and dry environment.
4. When inserting user interface connectors, ensure they are aligned correctly before insertion. Do not pull directly on the cable when plugging or unplugging the connector.
5. All parameters of the product are debugged before leaving the factory. Unless otherwise specified, it is recommended to use the recommended configuration parameters.
6. If used on an aircraft, the overall performance is affected by the aircraft's weight, power system, flight control system, and user settings. Users must possess considerable professional capabilities and must debug the product to the approved performance before field use.
7. Under no circumstances should the thermal imaging lens be directed directly at the sun.

8. The SD card should be removed when the system is powered off.
9. Keep the front lens clean and free of debris.
10. The first four seconds after the pod is powered on are for automatic gyro calibration. During this period, keep the pod as stable as possible without vibration; otherwise, the gyro data from the last startup will be used. If the pod drifts, restart it or send a gyro calibration command.
11. The control software must run on a 64-bit system computer.
